

Getting Started

Signing in, the access key, getting around, settings and updates

What this page is for

How to open the app at the start of a shift, sign in, find your way around, and keep the app up to date. Every other guide assumes you've done the steps here.

Before you start

The app link (ask a lead), and the store's **access key** the first time you use a new device.

1

Install it on the store phone

Open the app link in **Safari** (not Chrome). Tap the **Share** icon, then **Add to Home Screen** → **Add**.

From then on, always open it from the home-screen icon. It runs full-screen and keeps working when the Wi-Fi drops.

Tip: The new app has its own icon, separate from the original one. Both can be installed while the store switches over.

2

Enter the access key (first time only)

The first time a device opens the app, the sign-in screen shows an **Access key** box. Paste the store's key into it.

The app checks the key with the Google Sheet before saving it. **“That key was rejected”** means it was mistyped, or the key has changed: check with a lead.

Once it's saved you'll see **“Access key saved on this device”**, or **“Using the access key from the original app”** if that browser already had it.

Tip: An iPhone home-screen icon keeps its own storage, separate from Safari, so you may need to enter the key once on the icon even if Safari already has it.

3

Pick your initials and tap Continue

Choose your initials from the list. Everything you do this shift is stamped with them, and the date is always added automatically.

Not on the list? Tap + **Add new initials**, type them, and tap **Add**. They're added to the shared roster for every device.

Tip: The app asks who's working every time it's opened, so a shared phone never keeps the last person's initials.

4

Let it pull the latest from the sheet

After sign-in the app pulls the catalog, counts, consolidations, receiving and floor lists from the Google Sheet. This can take up to about 10 seconds.

If it's slow (weak signal), a **Continue with what's saved on this device** button appears after a few seconds. Tap it to start working: the pull carries on in the background and the screen updates when it's done.

5

Get around with the bottom bar

Six pages: **Home**, **Catalog**, **Counts**, **Consol** (Consolidations), **Receiving** and **Floor** (Floor Stock). Each one has its own guide.

The red number on Home is how many things need someone's attention right now.

6

The top bar

Initials: see who's signed in, or switch user.  **Refresh:** pull the newest data from the sheet (use it after a lead pastes a new list into the sheet).  **Settings:** access key, staff roster, feedback and version.

An **Offline** badge appears next to the title when the device has no connection.

7

Hand the phone to someone else

Tap your **initials** in the top bar, pick the new person's initials and tap **Switch**. Nothing else changes. Anything already staged stays where it is.

8

Settings

The **Google Sheet URL** and **Access key** rarely need touching. If the key is ever changed, paste the new one here and tap **Save & sync**.

Staff roster shows everyone's initials, and you can add new ones here. The bottom line shows the app version and when it last synced.

9

Leave feedback

Something broken, confusing or missing? In Settings tap **Leave feedback**, type it and tap **Send**. It goes straight to the Feedback tab of the sheet, tagged as coming from the new app.

Leave feedback

Something broken, confusing, or missing? It goes straight to the Feedback sheet.

Could the Replen list sort by department?

10

Install updates

When a new version is published, a bar appears at the top: **"A new version is ready."** Tap **Reload**. That's all.

A new version is ready.

Reload

If something goes wrong

You see	What it means	What to do
"Couldn't reach the sheet — showing what's saved on this device."	No connection, or Google was slow to answer.	Keep working; things you stage are kept on the device. Tap ↺ once you're back on Wi-Fi.
"The sheet rejected this device's access key."	The key on this device is wrong or out of date.	⚙ Settings → paste the current key → Save & sync. Ask a lead for the key.
Stuck on the loading screen	The sheet is slow to answer.	Wait for Continue with what's saved on this device and tap it.
The app looks out of date	An older version is still loaded.	Close and reopen the app, then tap Reload on the update bar.
