

Product Catalog

Look up products, set hard-tag placement, and add new products from MAO

What this page is for

One place for everything about a product: its details, where its **hard tag** goes, and how it's been counted recently. It replaces the original app's Tag Lookup and Product Master tabs. New products are added here by pasting from MAO.

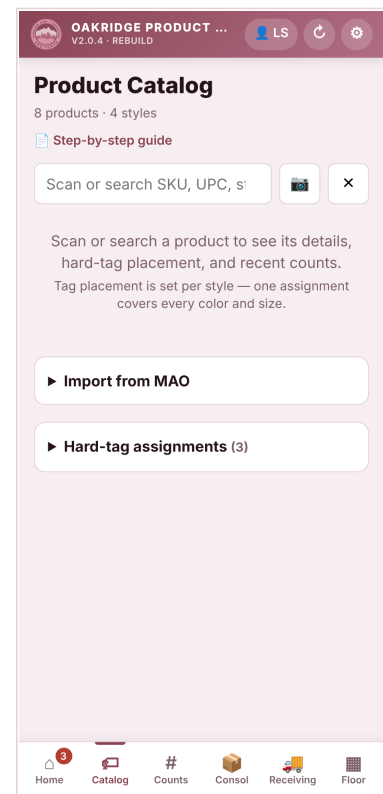

Before you start

Signed in. To set a tag or import products you need a connection.

1

Open the Catalog

Tap **Catalog** in the bottom bar. The line under the title shows how many products and styles are in the shared catalog.

2

Search or scan for a product

Type any part of a **SKU, UPC, style number or name**. Results update as you type.

Or tap the **camera** button and scan the barcode. An exact barcode match opens that product straight away. Tap **×** to clear.

Tip: Nothing found? The product isn't in the catalog yet. Add it with "Import from MAO" (step 6).

3

Open a product's details

Tap **Details** on a result to see its style, color, size, dept, the expected count last used on this device, its **hard-tag placement**, and its most recent counts.

Count this product takes you to Counts with this product already loaded. Tap < **Back to results** to return.

Set or change the hard-tag placement

In the **Hard-tag placement** box, choose a location from the list (Hood, Below Wash Tag, Through Wash Tag, Tag Side Pocket, Left Leg In-seam, Chest Pocket, or **No Hard Tag**) and tap **Save**.

A tag location belongs to the whole **style**, so it's applied to every color and size of that style at once. The line under the box says how many variants that covers.

Tip: Use "No Hard Tag" for a style that genuinely doesn't get one, so nobody wonders whether it was just never set.

Paste new products from MAO

Open **Import from MAO**. In MAO's **View Inventory** page, select and copy the product blocks, then paste them into the box.

Tap **Import / Update**. Products are matched by SKU: new ones are added, existing ones are refreshed. Expected counts are never overwritten.

▼ Import from MAO

Paste straight from MAO's *View Inventory* page. Products are matched by SKU and shared with every device.

6

Check they reached the sheet

The message under the buttons confirms how many were added and that they were **shared** with the sheet, so every device now has them.

If it says only some were shared, check your connection and import the same paste again. Re-importing is safe.

Tip: Export CSV downloads the whole catalog as a spreadsheet file.

▼ Import from MAO

Paste straight from MAO's *View Inventory* page. Products are matched by SKU and shared with every device.

Paste MAO View Inventory here...

Import / Update

Export CSV

Added 2, updated 0, and shared all 2 with the sheet.

7

Review every tag assignment

Open **Hard-tag assignments** to see every style that has a tag location set. Tap one to open that product and change it.
