

Counts

Scan, count, and save inventory counts to the shared log

What this page is for

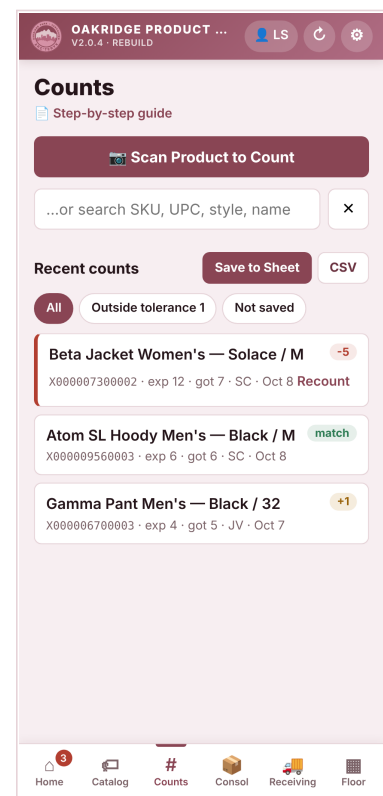

Cycle counting. Scan or find a product, confirm the expected quantity, enter what's actually there, and the difference is logged. Counts that are off by too much are flagged so they get a second look instead of disappearing into a list.

Before you start

Signed in. Counting works offline, and you send the counts to the sheet when you're connected.

1 Start a count

Tap **Scan Product to Count** and scan the product's barcode. If you can't scan, type in the search box underneath (step 2).

2 Or search for it

Type any part of the SKU, UPC, style or name and tap **Count** on the right result.

Gamma Pant Men's — Black / 32

Count >

3

Enter expected and actual

The card shows the product and when it was last counted, and by whom.

Expected is pre-filled with the last expected count used on this device. Confirm or correct it. Type what you actually counted into **Actual**, then tap **Log Count** (or press Enter).

X000006700003 · UPC 686487698712
Gamma Pant Men's — Black / 32
Last counted Oct 7 by JV: expected 4, counted 5.

Expected	Actual
4	4
Log Count	Cancel

4

Read the result

The message tells you whether the count **matched**, or was **over** or **under** and by how much.

If it's off by more than **2 units or 5%** (whichever is larger), it's flagged as **outside tolerance**. It shows in red here and as a card on Home until it's recounted.

Logged — count matched.

5

Scanned something that isn't in the catalog?

A **Not in the catalog yet** form opens with the barcode filled in. Enter at least the **SKU** and **Description** (style, dept, color and size if you have them) and tap **Add Product**.

It's added to the shared catalog and loaded straight into the count.

UPC 686487000999
Not in the catalog yet
Add it once and every device gets it.

SKU	Description
X000008800002	Kyanite Hoody W
Style	Dept
X000008800	
Color	Size
Black	M
Add Product	Cancel

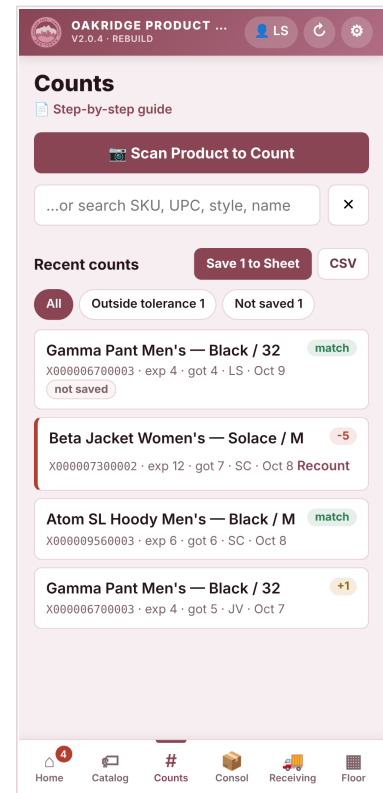

6

Save to Sheet

Counts are kept **on this device** until you tap **Save to Sheet**. The button shows how many are waiting, and unsent counts carry a **not saved** tag.

Saving sends every unsent count in one go. If the connection fails, nothing is lost: they stay queued, so just tap Save again later.

Tip: Save before you hand the device to someone else and at the end of your shift. Home reminds you if anything is left unsaved.

7

Recount anything outside tolerance

Tap the **Outside tolerance** filter to see only flagged counts, then tap **Recount** to load that product again.

The flag clears once the newest count of that product is within tolerance. **Not saved** shows only unsent counts, and **All** shows everything. **CSV** downloads the full log.
